

Introducing Rein Coin by Cryptolight

Rein Coin (short for Reinvent Coin) is a crypto currency from Cryptolight that is concentrated around the future of reinventing the online world and as a utility token that is focused on access to data management, performance-based competition, and developing protocols. The purpose of Rein Coin is for the coin to develop and invest funds into different block chain protocols without the restrictions of being dedicated on just one specific task or function. The vision for Rein is to raise a set amount of funds on an ongoing yearly basis that prohibits the Currency from deliberately over diluting the value of the coin from its coin holders and itself while allowing access to protocols that are developed by Cryptolight for utilizing the block chain for new technologies.

Yearly Rein Crypto Currency will add a block of coins into the pool on a limited fixed basis. The currency will then utilize the money raised for finished designing and building the data management block chain cloud program as well as the performance-based gaming application. We believe these platforms will be a great addition to the growing use cases for cryptocurrency and blockchain technologies. REIN will power these new platforms making it a token with use case in it of itself. Moreover, we plan to eventually use REIN as a means to vote for the direction we take our projects in. We have two projects in mind, and we want the community to decide how we do it, and which we do first. During this period Rein will hold contracts with traders and asset managers to invest the funds into various markets including equities, cryptocurrency, Forex, and commodities markets at which the Cryptolight management team deems fit for stability and growth. The goal for Rein investments will be 1 percent growth per a day on the designated investment funds. The investment profits will then be utilized for developing Rein's block chain protocols, supporting the tokens value, purchasing tokens back on an ongoing basis, and reinvestment. Coins that the currency purchases back in the marketplace will be used for staking as well.

Rein Coin has chosen to run off the Polygon blockchain network. Polygon has been chosen due to their efficiency and high-speed capabilities for transactions. An additional reason is due to the affordability of converting coin transactions. A typical transaction on the Polygon blockchain is less than a dime whereas on the Ethereum blockchain it is not unheard of to pay over Fifty Dollars U.S. for "gas" or conversion fees.

Cryptolight is structuring the coin with a total token supply of Seven Hundred Fifty Million (750,000,000). Cryptolight will begin preselling tokens with a limit of Fifty Million coins (50,000,000) at five cents per a token (\$.05) for a total of Two Hundred Fifty Thousand U.S. Dollars (\$250,000.00). The presale of Rein will be offered to institutions and individual investors as well. The money raised will be for continuing the build out of the website, completing the infrastructure for the coin along with minting costs, and beginning contracts for

platforms along with investments. The Cryptolight founding member will show transparency and be providing audits.

After the initial presale, the yearly limit of adding additional coins to the float will be restricted to and not to exceed Twenty-Five Million tokens (25,000,000) per a year at a price deemed and reflecting current prices at the time. Cryptolight will also be holding a total of Seventy Five Million Coins (75,000,000) with a limit of only selling Seven and a half Million tokens (7,500,000) per a year and will always show total transparency to the company's holdings.

Cryptolight will also charge a one percent (1%) surcharge per the purchase of tokens and a three percent (3%) fee when selling the token to be used for general and marketing fees.

The presale of Rein Coin will begin in Q1 of 2022. The website will be completed by Q1 of 2022. Rein will be listed on Quickswap as early as Q1 2022 but no later than Q2 of 2022.

Let's Make it Rein
